This is 1.4 percent below producer deliveries in February 1967. 1/2 Average daily delivery per producer increased from 1,061 pounds in February 1967 to 1,089 pounds in February of this year. Producer numbers, producer deliveries, average butterfat percentages, and average daily deliveries per producer for individual markets are shown on table 3.

Producer Deliveries Used in Class I. The volume of producer deliveries used in Class I in 71 markets was unchanged from last year, at a total of 2.7 billion pounds for the month of February 1968.1/

Gross Class I sales, which comprise total Class I sales by regulated handlers, in-and-out of defined marketing areas, increased 0.3 percent in the 71 markets for the month of February.1/

If the 50 percent requirement is met during each of the months of September through November, the plant has automatic pool plant qualification for the months of December through August.

A handler or a cooperative association may divert to nonpool plants up to 50 percent of its producer milk in the months of April through August, 30 percent in the months of December through March, and 20 percent in the months of September through November.
